

# Technology for Universal Education

SIMS 290 Guest Lecture, April 19, 2005

Matthew Kam

Computer Science and Berkeley Institute of Design

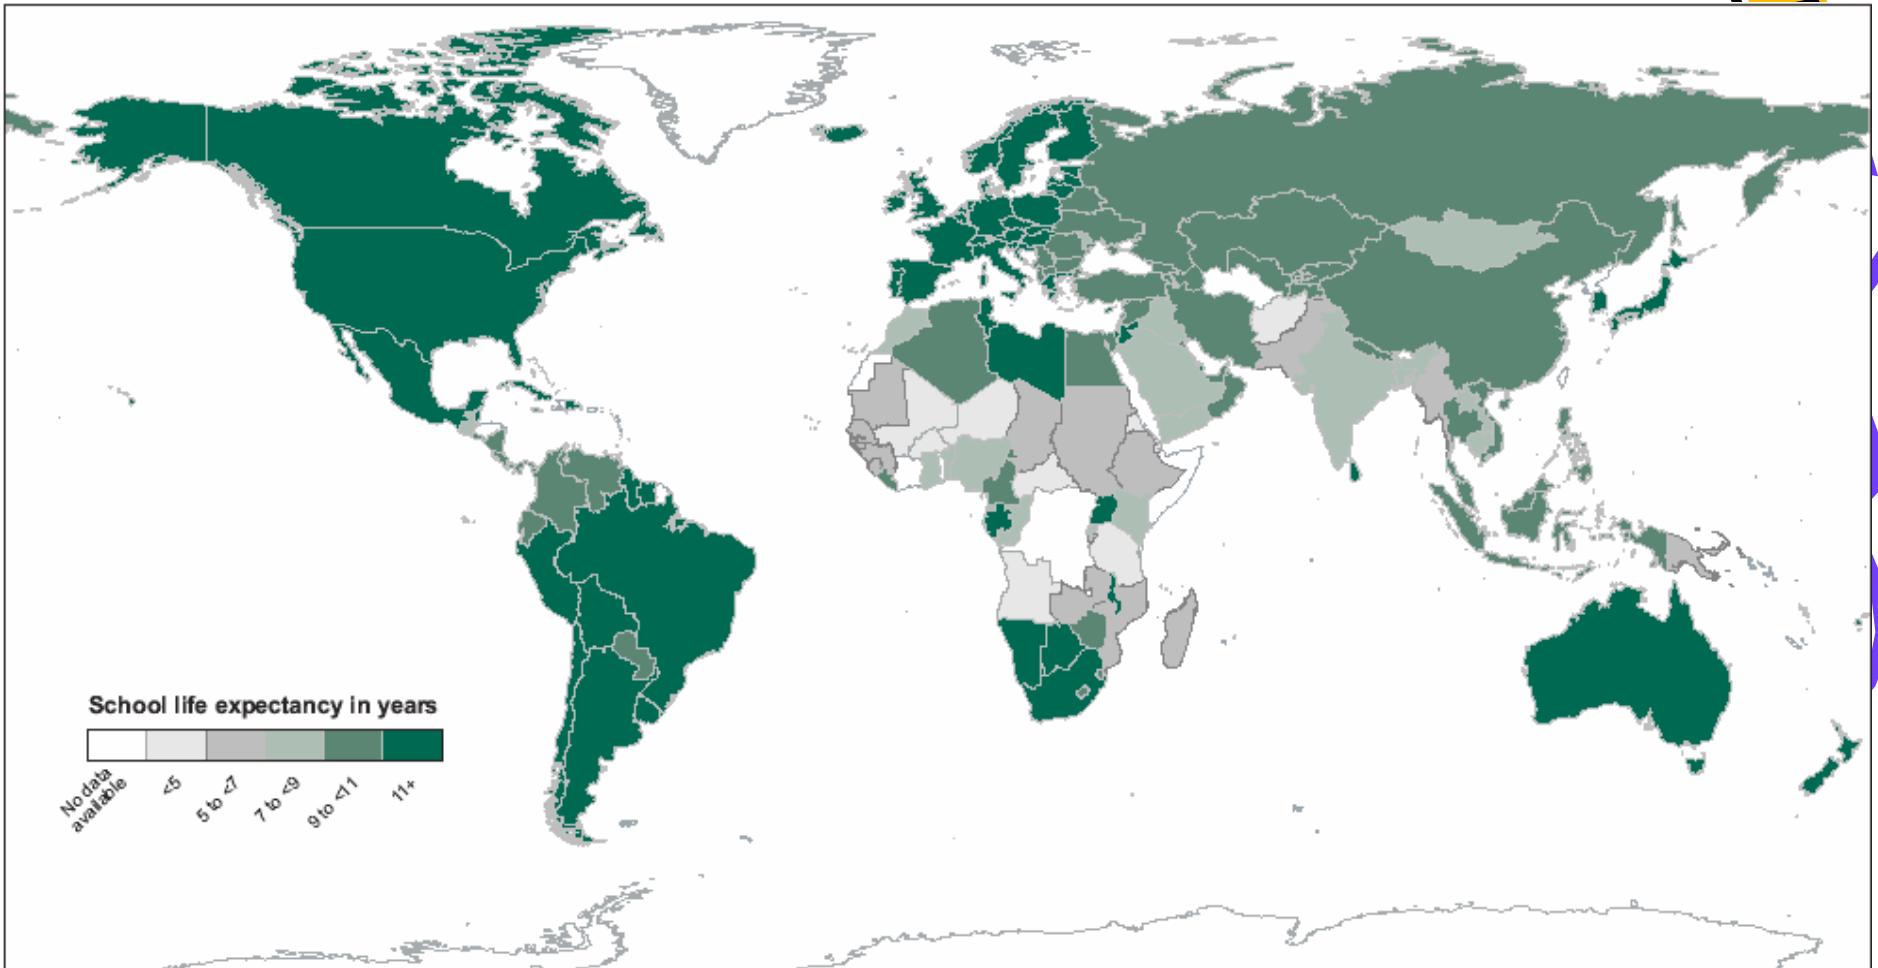

# Workshop Announcement

- Needs and Opportunities for Technology in Developing Regions
- [bridge.berkeley.edu/workshop\\_needs.html](http://bridge.berkeley.edu/workshop_needs.html)
- Tentative topics
  - Education
  - Energy and the Environment
  - Informal trading markets
  - Microfinance, micro-enterprises
- Asia, Eastern Europe, Latin America

# How long can children expect to stay in school?

Source: UNESCO, 2004

# How does duration of schooling relate to national wealth?

Source: The World Bank, 2003

# India, A Land of Disparity

# States & Capitals INDIA

Map not to Scale

# Background

- 3-year pilot in village schools pioneered by Dr. Urvashi Sahni

# Background: CSCL and Computer Literacy

# Background: Hindi Courseware

# Background: CSCL and Hindi Courseware

# Background: CSCL and Student Authoring

# The Study Hall

# Contrast: Bright Uniforms

# Contrast: Furnished Classrooms

# Contrast: Swimming Pool and Facilities

# To the Village Schools

# To the Village Schools

# Rural Public Schools

# Rural Schools: Life as a Student

# Rural Schools: Attendance

# Rural Schools: Physical Environment

# Rural Schools: Physical Environment

# Rural Schools: Lack of Electricity

# Rural Schools: Lack of Electricity

# Rural Schools: Lack of Electricity

# Limited Coverage

# Rural Schools: Computer Literacy

# Rural Schools: Pride in Being Self-Contained

# Rural Schools: Pride in Being Self-Contained

# Newspapers

# After-School Program: Classes

# After-School Program: Computer Lab

# After-School Program: Computer Lab

# Village Schools + After-School Program: Evidence of Learning

# Village Schools + After-School Program: Evidence of Learning

# Other Forms of Literacy

# After-School Program: Urban Slum

# After-School Program: Urban Slum

# Constraints

- Teacher shortage, qualifications
- Unsupportive parents, school attendance
- Unreliable electricity
- Keyboard usability
- Limited daily computer usage (~15 minutes)
- Limited building space
- Lack of Internet access (village school), or poor connectivity (Study Hall)

# Enablers

- Conducive public policies
  - Rice and monetary incentives
  - Standardized state-wide syllabus
- Culture of peer tutoring, 2-way exchange
- Pride in personal accomplishments
- Availability of textbooks and stationery
- Child interest in graphical representations
- Ample open spaces
- Shared computer was a draw for parents

# Hypothesis 1

- Learning through digital storytelling

# Digital Storytelling

- Motivation: existing authoring tools (Flash, PowerPoint, Adobe Premiere) too complicated for 8-10 year olds
- Simple tool for students to create digital stories and interactive exercises in small teams
- Pen-based user interface, sketching
- Low-cost digital camera, microphone
- Possibly also color printer and/or mobile computing

# Expected Educational Value

- Explaining concepts is part of active learning
- Ability to communicate concepts to peers
- Team authoring process involves collaborative learning, develops teamwork skills
- Creation of digital content that could be shared with other schools
- Developing interactive exercises fosters metacognition
- Additional means for teachers to assess student authors' understanding

# Hypothesis 2

- Usability engineering and pedagogy must go hand-in-hand

# Hypothesis 3

- Mobile technology can help overcome constraints in access to education

# Hypothesis 4

- Shared computing can be augmented through paper-based user interfaces

# Other Hypotheses

- (Audience participation)

# Computers can improve teaching and learning in 6 ways (Rusten)

- Computer-assisted learning
- Simulation and exploration
- Research and analysis
- Computation and production
- Learning networks
- Artistic expression and creativity

# A Dark Side of Education

- Disconnect between formal schooling and informal economies
- Disenchantment
- How do you create more formal sector jobs?
- How do you create more opportunities for people to realize their full potential?
- Population pressures of rural-urban migration?
