

Déjà vu all over again?							
" today's processors are nearing an impasse as technologies approach the speed of light" David Mitchell, <i>The Transputer: The Time Is Now</i> (1989)							
 Transputer had bad timing (Uniprocessor performance↑) ⇒ Procrastination rewarded: 2X seq. perf. / 1.5 years 							
 "We are dedicating all of our future product development to multicore designs This is a sea change in computing" Paul Otellini, President, Intel (2005) 							
• All microprocessor companies switch to MP (2X CPUs / 2 yrs) \Rightarrow Procrastination penalized: 2X sequential perf. / 5 yrs
