Lecturer: Tom Zajdel  
Email: zajdel [at] eecs [dot] berkeley [dot] edu

Tutor: Allison Vuong  
Email: allison [dot] vuong [at] berkeley [dot] edu

Lecture Hours: From 10:15 to 11:45 am in 225 Bechtel  
Discussion Hours: From 4:15 to 5:15 pm in 225 Bechtel  
Study Hall Hours: From 7:45 to 10:00 pm in Unit 1 All Purpose Room

Course Information: Welcome to UC Berkeley! This intensive summer course is meant to give you a taste for college-level work, as well as help you develop some intuition about the topics you will cover in the first half of Physics 7A: Mechanics for Scientists and Engineers. Most importantly, you will begin to think about abstract mechanical concepts and apply them to real-world situations.

Learning Goals: By the end of this course, you should be able to...

- Explain the physical intuition behind forces in a variety of contexts
- Confidently apply theoretical concepts to solve classical mechanics problems

Even though a variety of topics will be covered, there is simply not enough time to offer exhaustive practice for all of them. Therefore, the main objective is to offer a taste for each idea and develop an intuition that will help you keep the big picture in view as you solve problems. Knowledge of memorized formulae will inevitably rot away with time; however, the concepts underpinning them should never be forgotten.

Topic Schedule: Each day of lecture will focus on one core idea in mechanics:

- Units and 2D Kinematics .......................... Lecture 1
- Newton’s Laws ........................................ Lecture 2
- Circular Motion ........................................ Lecture 3
- Work and Energy ................................. Lecture 4
- Rotational Motion .................................. Lecture 5
- Momentum ............................................ Lecture 6

Text: No textbook is required. Lecture notes can be found online and are based on the text used in Physics 7A and 7B, *Physics for Scientists and Engineers*, 4th ed. by Douglas Giancoli.
Homework: Practice problems will be assigned after every lecture and will cover the day’s topic. There will be five graded assignments and one optional assignment. Homework is due at the beginning of the following day’s discussion section. Late work will not be accepted for credit. Collaboration on homework is encouraged, but all work turned in must reflect your personal understanding of the material.

Final Exam: There will be a one-hour comprehensive final exam on August 19, 2015 in 225 Bechtel at 4:15 pm. A calculator and a one page front-and-back formula sheet are the only resources you may use.

Grading: Assignments and examinations will be weighted as follows:

20% Homeworks
80% Final exam

Even though this course is not worth any credit, a letter grade will be assigned according to your performance with the following grading scale (numbers are given in overall percent):

<table>
<thead>
<tr>
<th>A+</th>
<th>A</th>
<th>A-</th>
<th>B+</th>
<th>B</th>
<th>B-</th>
<th>C+</th>
<th>C</th>
<th>C-</th>
<th>D+</th>
<th>D</th>
</tr>
</thead>
<tbody>
<tr>
<td>95</td>
<td>90</td>
<td>87</td>
<td>83</td>
<td>80</td>
<td>77</td>
<td>73</td>
<td>70</td>
<td>67</td>
<td>63</td>
<td>60</td>
</tr>
</tbody>
</table>

Academic Honesty: The UC Berkeley Student Honor Code consists of one sentence: “As a member of the UC Berkeley community, I act with honesty, integrity, and respect for others.” You are expected to abide by this policy. You can find more information at [http://www.asuc.org/honorcode/index.php](http://www.asuc.org/honorcode/index.php).

Extra Help: Please take advantage of the resources available to you and be engaged during lecture and discussion time. Do not hesitate to contact Allison and me if you have any questions, since the course moves very quickly and builds on itself. This course will be difficult, especially if you have not taken physics before, but you’re surrounded by an amazing support network: your fellow students. Learn to work together to enhance your understanding of the material. If you strive to learn, to teach each other and yourselves, and you’ll have an excellent time here at Berkeley!
